

GROW TOMATOES

A CROP MORE PROFITABLE THAN CORN

A crop which enriches your land and one which gives you quick returns.

Tomato acreage is being contracted at higher prices than ever known before. Why raise corn at the present prices? Our regular growers have raised tomatoes instead of corn for many years when they brought 20 per cent lower price and when corn was worth one and one-half times as much as today.

Their tomato crop was more profitable to them. Why is it not now? It is, and this is the reason why all our tomato factories are run to their fullest capacity. We can use 300 acres of tomatoes at our Newport factory. Call at our offices and let us show you what others have done.

We will give you complete instructions on how to cultivate and there will be no chance for failure. All tomato contracts will be closed March 20 unless 300 acres are contracted for before that date.
